

CANCER IS THE # 2 KILLER IN AMERICA.

If anyone in your family had cancer, you may be at risk.

A Simple DNA test can reveal if You are at Risk for Hereditary Cancer!

Cancer runs in families because mutated genes are handed down from generation to generation.

DNA Analytical Services, a trusted source of confidential genetic tests, provides a simple non-invasive DNA test which examines over 100 different genes to determine if you are at risk for 16 different hereditary cancers including Breast, Ovarian, Lung, Pancreatic, and Melanoma Cancer.

- The tests are covered by most insurance providers so it can be NO COST to you.
- Government approved – The test and our labs are approved and certified by local, state, and federal agencies including Medicare.
- Non-Invasive – just a swab to collect your DNA from inside your cheek. No Blood to be drawn
- Taking the test is as simple as 1 – 2 – 3

1 – Take an easy Cancer Quiz to see if you might be at risk

2 – If you have a history of family cancer, your doctor will take a swab from inside your cheek and send the sample to our triple Certified Lab – certified by the FDA, Medicare, and CLIA

3 – The lab sends a COMPREHENSIVE report to your doctor to show if you are at risk.

If the test shows you are at risk, you & your doctor can take control and develop a preventative treatment plan

Personalized and Preventative Medicine are encouraged by most health insurance provider, so there is

No cost to you with most Insurance providers, Medicare, & TriCare because they recognize that Prevention is less traumatic for you and less expensive than treatment

Private – All information is private. Only you and your doctor get the results. The information is not available for your insurance provider or anyone else.
